

Cubro 1 Link Copper Bypass

PRODUCT OVERVIEW

The Cubro Copper Bypass for 10/100/1000 links is the perfect choice to protect sensitive data-links in case of electrical power and/or link problems. Usually, it is deployed together with a network security appliance such as an intrusion detection system (IDS) or an Intrusion prevention system (IPS). Whenever these security devices need to be rebooted or go offline for any reason, the Cubro Copper Bypass will make sure that faulty or unavailable devices are bypassed so that data traffic will continue to flow.

In stand-alone mode, the Cubro Copper Bypass will be able to offer secure and fast protection against electrical power failures and also against link failures. Whenever such a problem is detected the extremely fast switching relays will make sure that the link is closed.

Moreover, the Cubro Copper Bypass can be controlled by an IP/Ethernet management interface to read-out the status of the Bypass and or to control it. In addition, it also supports SNMP to be integrated easily in a supervision system.

Bypass

At a glance

Definition

A bypass switch (or bypass TAP) is a hardware device that provides a fail-safe access port for electrical links.

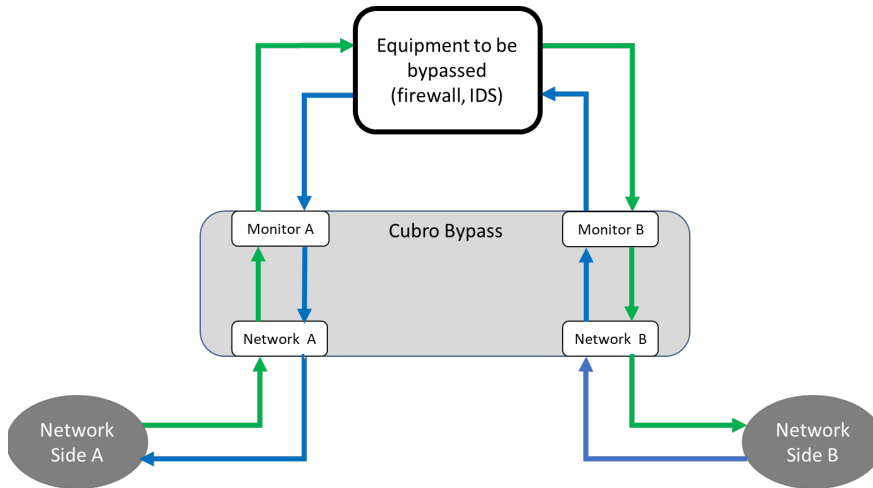

Advantages of Cubro 1 Link Copper Bypass

- Increased reliability on critical network links
- Fail-safe inline protection
- High-speed switching
- LED indicators show power, speed, link, and activity status
- Tested and compatible with most of the monitoring devices
- Management via CLI
- SNMP support

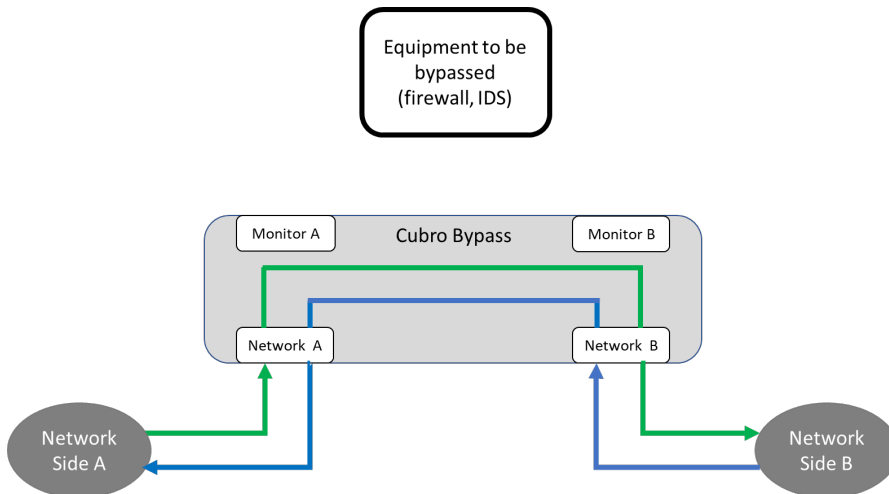

Standalone mode

In stand-alone mode, the Cubro Copper Bypass is the perfect protection against power outage and also for device link failures. Super fast switching relays will close the live circuit to avoid data loss on the live link.

Traffic flow in normal mode

Traffic Flow in failure mode (electrical power and/or link down on Monitoring ports)

Together with Cubro Packetmaster EX Series

When the Cubro Copper Bypass is used together with the Packetmaster EX family, it adds superior Heartbeat capabilities. Heartbeats generated by the Packetmaster will be sent through the monitor link and will also be received and analysed by the Packetmaster EX allowing to detect any performance degradation of the bypassed devices.

Specifications:

- Operating Temperature: -5°C to 55°C
- Storage Temperature: -10°C to 70°C
- Relative Humidity: 10% min, 95% max, non-condensing
- Input Power: 12V DC, 15W

Certifications:

- EMC Emissions: EN55022 (CISPR22) Class B, EN61000-3-2,-3
- EMC Immunity: Compliance to EN61000-4-2,3,4,5,6,8,11, EN55024,
- Safety Standards: UL60950-1, EN60950-1 approved
- Fully RoHS compliant

PRODUCT CAPABILITIES / FEATURES

Port	10/100/1000 MBit RJ 45 connector
Relay switching time	<2 ms
Easy use and operation	Straight-forward operation via remote connection
LED Indicators	LEDs on the front panel indicate power, link and activity status
Rugged 19" Housing	The unit is delivered in a rugged housing with precise connector labelling on the front panel.
Power	12 V DC dual power supply
Options to activate the bypass	1) via CLI 2) power fail 3) link loss on monitoring side 4) heartbeat loss (controlled by Packetmaster EX)
Management	CLI and SNMP support

ORDERING INFORMATION

Product Type & Number	Description
CBR.BYSW-Copper-1-1-R3	Copper Bypass switch, 1 Link, RJ45 connector; 1/3 19" rackmount housing (rackmount kit not included)
CBR.RM19-3	Cubro 19" Rackmount Kit for 3x 1/3 19" units
