Thinking about Enterprise Security?
Start with a Visibility Foundation

Join NetTap, our cybersecurity hero, as he battles the cunning HackMen to protect your digital kingdom.
Dive into our comic strip series and discover how to build a robust network visibility foundation with Cubro's high-quality TAPs.

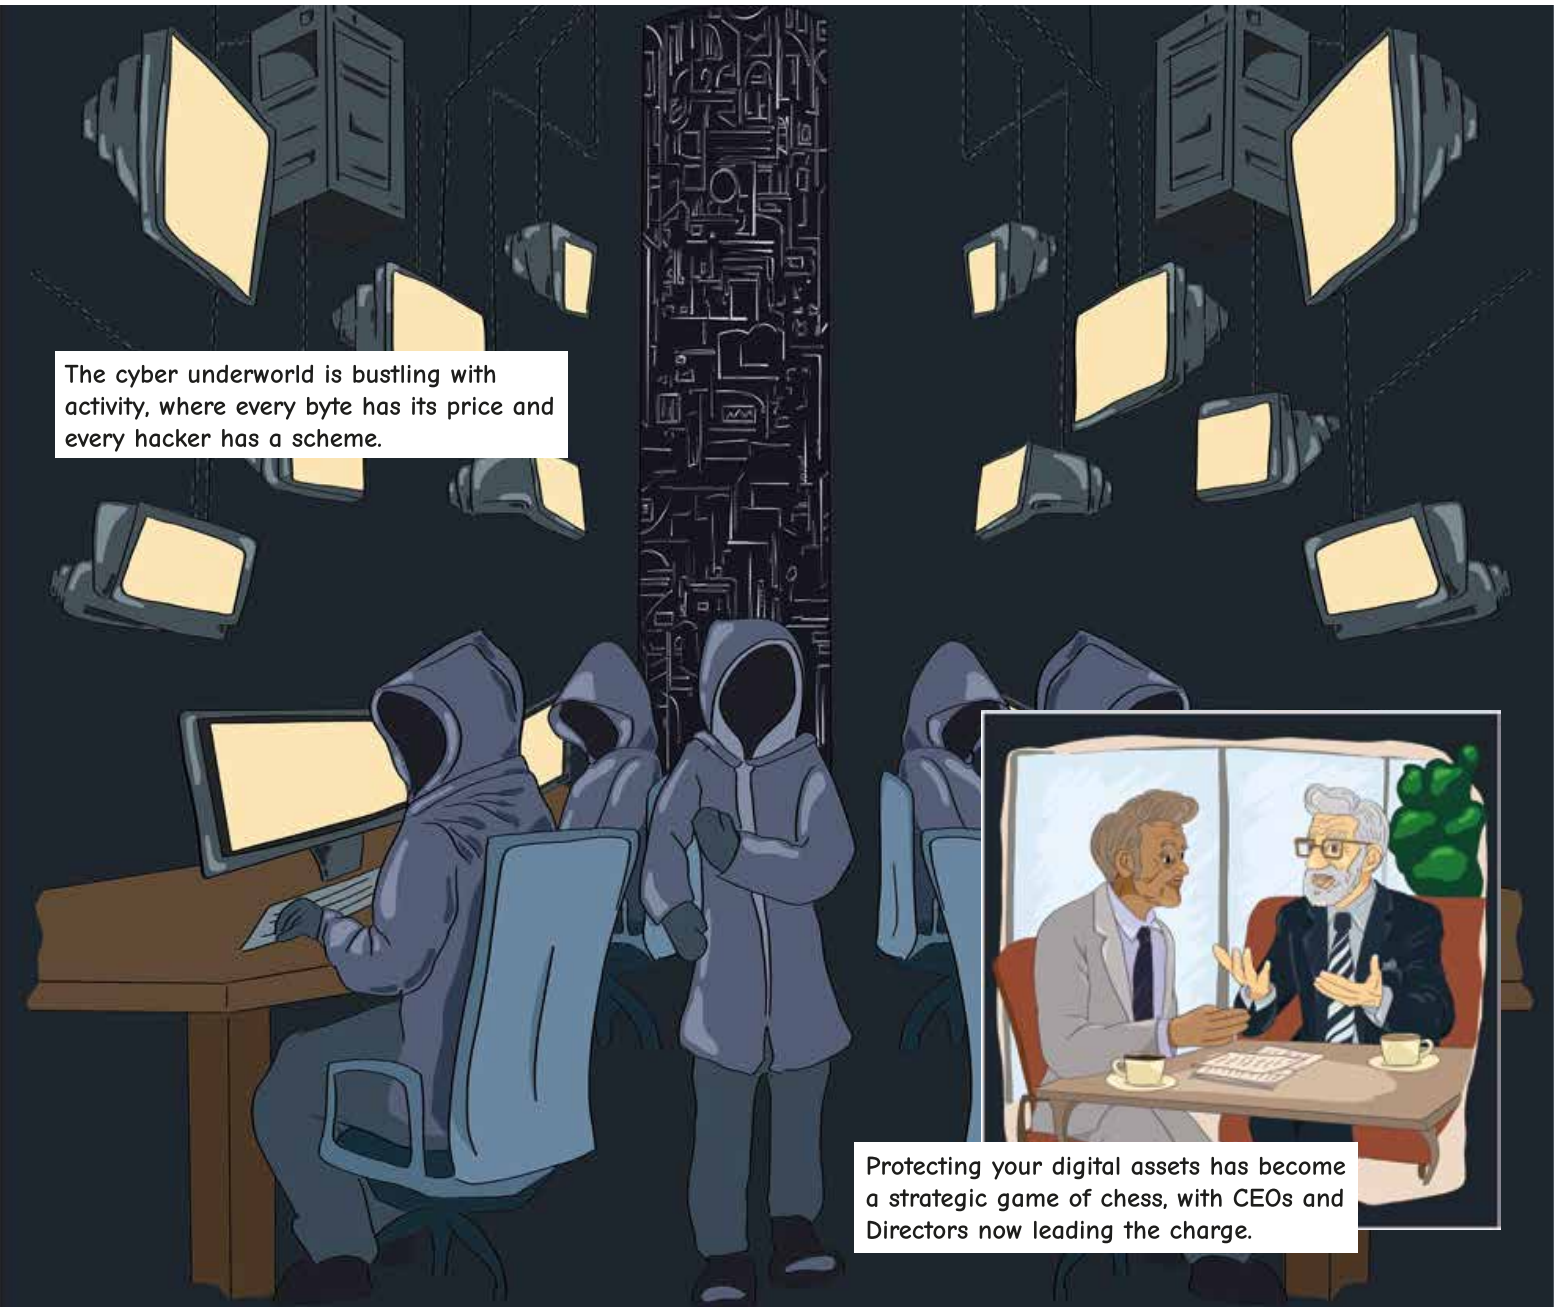

Think you can keep the bad guys out of your network?

There is no front door to bar.

They want to vacuum up your corporate data, customer lists, email, and more; for sale on the Dark Web.

The cyber underworld is bustling with activity, where every byte has its price and every hacker has a scheme.
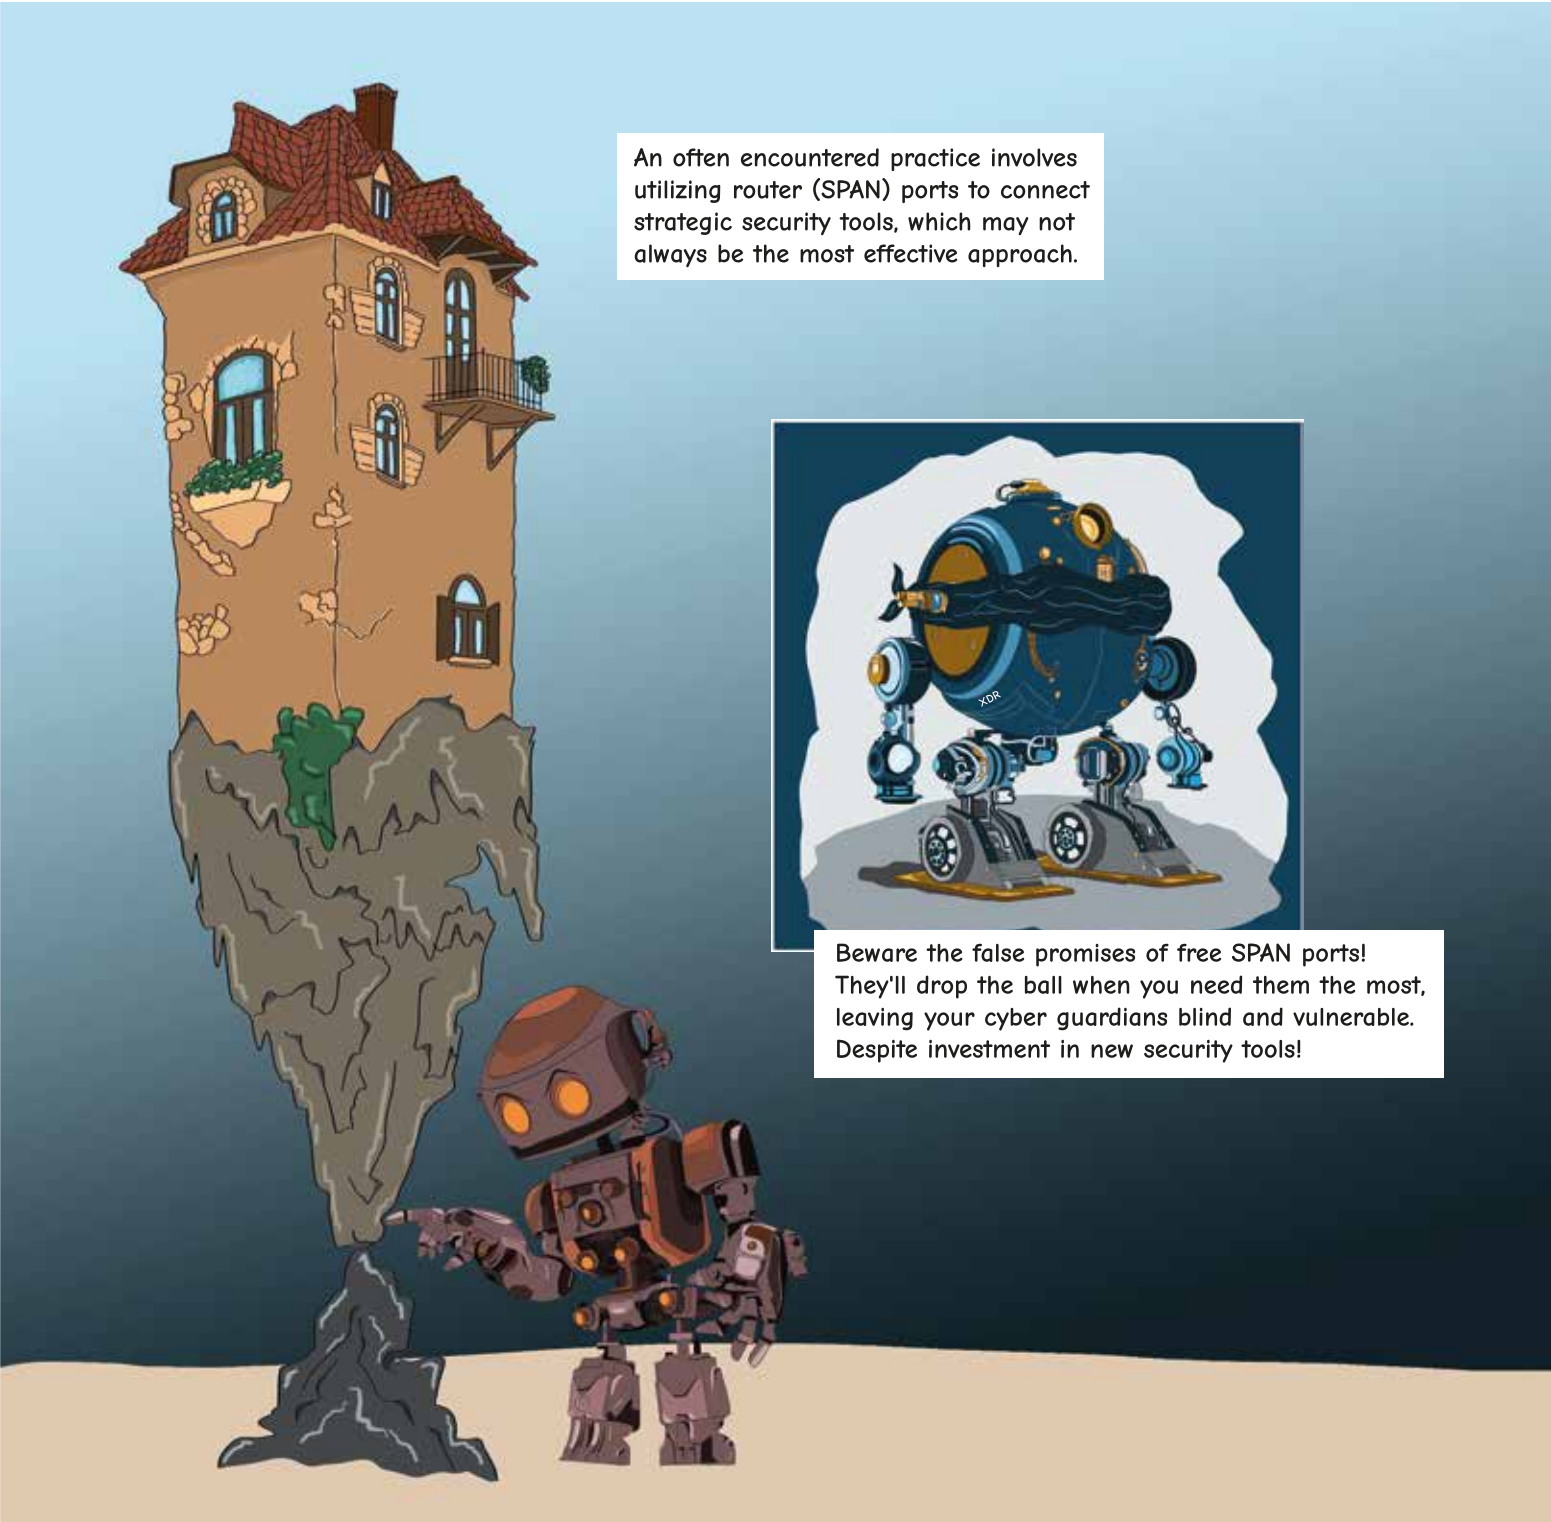

Protecting your digital assets has become a strategic game of chess, with CEOs and Directors now leading the charge.

It's time to put 'cops on the beat' to patrol the digital streets, sniffing out threats before they can strike.

Continuous security monitors like Network Detection and Response systems are basic hygiene.

But even the mightiest cyber guardians need a solid foundation to stand upon, a network of eyes and ears to keep watch over the digital landscape.
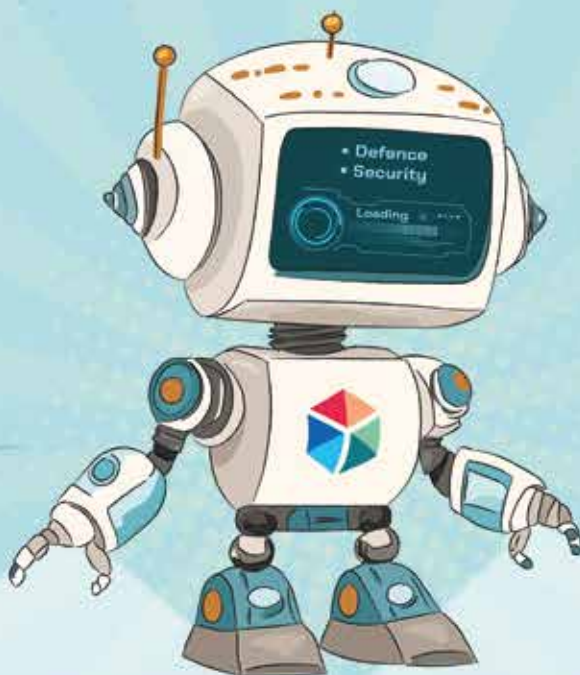

An often encountered practice involves utilizing router (SPAN) ports to connect strategic security tools, which may not always be the most effective approach.

Beware the false promises of free SPAN ports! They'll drop the ball when you need them the most, leaving your cyber guardians blind and vulnerable. Despite investment in new security tools!

Every packet counts! Don't let your defenses falter due to a weak link in the chain. Arm yourself with the right tools, like Cubro's high-quality TAPs, and keep your cyber guardians sharp and vigilant.

Your data is your kingdom - defend it with Cubro.

Mission complete!

Follow these links to learn about building a visibility foundation for your strategic security and analytics initiatives.

Learn about the advantages of Cubro's high-quality, cost-effective family of TAPs. And especially the risks of "free" SPAN ports.
